

CIRCULAR HOSPITALITY

LEARNING - TECHNOLOGY - HOSPITALITY

Newsletter 3. CIRCULAR4Hospitality

Welcome to the third edition of the C4H project newsletter! In this issue, we are excited to share updates on our key initiatives, focusing on training for sustainability and the latest news from the hospitality sector.

1. Preparing the Next Generation of Sustainability Professionals: Toolkit for VET Schools and Stakeholders

Training future hospitality professionals is at the core of our mission to promote sustainability and circularity. We are thrilled to announce the development of a new Toolkit for Sustainability and Circularity Laboratories tailored for VET (Vocational Education and Training) schools.

The objective of the toolkit is to provide students with practical tools and knowledge to understand circularity principles and apply them in the hospitality sector. Through interactive workshops, simulations, and digital resources, we aim to equip future professionals to tackle sustainability challenges.

2. Progress on the E-Training toolkit for managers of sustainability

Meanwhile, we continue refining our toolkit for hospitality managers and students, which focuses on:

- Managing sustainability projects effectively.
- Achieving green certifications such as the EU Ecolabel and Green Key.
- Providing practical tools to monitor and improve resource efficiency.

The toolkit aims to provide students with a strong foundation in sustainability and circularity principles, foster critical thinking and ethical decision-making, and develop practical skills for implementing sustainable initiatives in the hospitality sector.

3. Global Trends: Sustainability in Hospitality Worldwide

The international landscape offers inspiration and innovative models to promote circularity in hospitality. Here are some noteworthy examples:

- Treehotel (Sweden): Uses local and recycled materials, with rooms designed to minimize environmental impact.
- Maldivian Resorts: Programs to transform food waste into fertilizer for local gardens.
- Accor Group (France): Partnership with **Too Good To Go** to reduce food waste in hotel buffets.

4. Emerging Trends:

- Modular designs using recycled materials.
- Apps for real-time monitoring of energy consumption and carbon emissions.
- Regenerative architecture that repairs the surrounding environment.

These initiatives serve as a source of inspiration for our projects.
